Company Profile

Huber Technology (Pty) Ltd head office

Huber Technology (Pty) Ltd is a subsidiary company of Huber SE in Germany and are a world leader of supplying innovative equipment and machinery manufactured completely from stainless steel for the municipal and industrial water and wastewater treatment industry.

Huber Technology was established in 1992 in South Africa and introduced fine screening into the market which is currently the norm in the industry. Our main focus is liquid/solid separation in general and inlet works equipment in particular. We offer a comprehensive line of stainless steel equipment ranging from the inlet works down to the sludge handling.

It has long been the company's belief that the best source material for environmental products is stainless steel, and for this reason stainless steel and the latest synthetics are the only materials used to build Huber products. All products are entirely submerged in an acid picking bath and passivated before leaving the factory.

HUBER invented and introduced the famous ROTAMAT® products and STEP SCREEN®s. With more than 45,000 installations worldwide and 400 machines installed in South Africa alone we have unmatched experience and expertise we can offer our customers.

30,000 m² main production factory and offices of HUBER SE in Germany
