High-tech at Huber

HUBER Technology's UK Headquarters

More than 30,000 m² Main Production Factory and Offices in Germany

HUBER Technology was incorporated in the UK in 1993 (Registered Name: Rotamat Ltd.) as a wholly owned subsidiary of HUBER SE, the manufacturers of the ROTAMAT range of waste water treatment equipment. In the UK we employ over 70 staff, some of whom have worked with HUBER for 25 years.

Our mission is to protect the environment with sustainable waste water solutions.

HUBER Technology's headquarters is based in Chippenham, Wiltshire. The premises have been substantially enhanced in recent years and offer a large workshop facilities and modern offices. Regional centres in Rotherham, Dundee and Portadown provide dedicated installation and a full after-sales service programme to customers in these areas.

Quality and service are at the centre of HUBER's philosophy. Our parent company, which was formed over 175 years ago, has remained a family owned business and now operates globally through subsidiaries and agents. Huber has continually invested in state-of-the-art manufacturing facilities, incorporating the very latest production techniques. All products are made from stainless steel and are fully acid cleaned and passivated before leaving the factory, ensuring enduring quality and extended lifetime which meets their demanding operating environment.

Business Description

In the UK we have established a reputation as a leading supplier of proprietary high quality stainless steel waste water treatment solutions serving both municipal and industrial markets in the UK and Ireland. Our customers include all the main UK water companies and their contractors & delivery partners, as well as a wide range of industrial users in the food, beverage, paper, anaerobic digestion and environmental sectors. Huber equipment, designed and manufactured in Germany, is customised to meet individual customers' requirements at our facility in Chippenham.

HUBER Technology offers a full range of superior equipment for Inlet Screening (fine & coarse); Screenings Removal, Washing, Conveying and Compacting; Sludge Screening, Thickening, Dewatering and Drying; Storm Screening; Grit Removal and Washing; Grease and Solids Removal; Micro Screening for Tertiary Treatment; Membrane Filtration; DAF plants and technology for Thermal Energy Recovery from waste water. We design and build bespoke control panels to ensure efficient and cost effective operation of our equipment. We also offer an extensive range of plant for hire and trials to meet customers' short term needs and help with on-site development work.
