Pumping Station Screens

Pumps and lifting units are used where wastewater needs to be lifted to a higher level so that it can be passed further on by gravity. However, the solids contained within the wastewater frequently lead to pump failure. Labour-intensive manual cleaning is required to restore the function of the units, or they may need to be replaced, both resulting in high long-term costs.

Reliable solids removal is therefore the only alternative to maintain the operating stability of the pumps.

These pumping stations screens offer an the ideal solution for this task, whether for new structures or refurbishment.
